

**AIR8**<sup>®</sup>

## ESKO AIR8 FIT TEST ADAPTOR

### 800

Use to conduct quantitative fit testing (QNFT) on AIR8 Reusable Respirators with certain sampling instruments, such as a TSI<sup>®</sup> PortaCount<sup>®</sup> Respirator Fit Tester.

#### FEATURES

- Designed to be used with the AIR8 twin filter respirators: 8900 Full Face Mask and 8600 Half Face Mask
- Quantitative fit testing is required to obtain an OSHA assigned protection factor (APF) of 50 for full facepieces in negative-pressure air-purifying mode
- Easy to install: Whether you're testing the 8900 Full Face Mask or the 8600 Half Face Mask with a bayonet style cartridge/ filter connection, this adaptor allows you to easily thread the plastic tubing through the inhalation valve into the interior of the facepiece. This enables the sampling instrument, such as a TSI<sup>®</sup> PortaCount<sup>®</sup> Respirator Fit Tester, to measure the test agent concentration inside the respirator.
